

EDUCATION

- **University of Illinois Urbana-Champaign** Urbana, IL, USA
Ph.D. of Computer Science Aug. 2024 - May. 2029
 - **Research Field:** Self-evolving AGI Systems, Large-scale Generative Models, Data-efficient Policy Optimization, Trustworthy & Interpretable AI, RLHF, Reinforcement Learning Theory & Algorithms, MoE, MoA.
 - **Service:** Served as the reviewer at top-tier machine learning conferences, including ICML, ICLR, NeurIPS, AAAI and AISTATS.
 - **Relevant Course:** Machine Learning Algorithms for Large Language Models (LLMs).
- **Tsinghua University** Beijing, China
M.Eng. of Computer Technology; GPA 3.97/4.0, Top 1.3% Sept. 2021 - Jun. 2024
 - **Service:** Served as the reviewer at top-tier machine learning conferences, including ICML, ICLR, and NeurIPS.
 - **Relevant Course:** Stochastic Processes (A). Big Data Systems (A⁺). Digital Processing of Speech Signals (A). Data visualization (A⁺).
 - **Language Proficiency:** Attained a score of **101** on TOEFL, with a performance of 26 in Reading, 25 in Listening, 23 in Speaking, and 27 in Writing.
- **Nankai University** Tianjin, China
B.Eng. of Intelligent Science and Technology; GPA 93.28/100 (3.9/4.0), 1/83 Sept. 2017. - Jun. 2021
 - **Honors:** Ranked 1st in my major and obtained the National Scholarship twice (Top 1).
 - **Service:** Served as the minister at the Faculty Student Council.

RESEARCH INTEREST

- **Primary:** Sample-efficient reinforcement learning algorithms with a focus on self-evolving systems, human feedback integration (RLHF), and large-scale generative models. Particular emphasis on theoretical foundations for collapse-free continuous/lifelong learning and optimal policy convergence.
- **Secondary:** Bridging the gap between theoretical guarantees and practical scalability in AI systems, with emphasis on interpretable reinforcement learning algorithms that achieve both mathematical rigor and state-of-the-art performance in challenging real-world applications.

RESEARCH HIGHLIGHTS

- **Self-Evolving RLHF for Flow Matching Generative Models**
Sept. 2024 - Present
 - **Role:** **1)** Introduced a self-evolving RLHF framework (ORW-CFM-W2) that enables flow matching models to continuously optimize through online reward feedback without relying on human-collected datasets or likelihood calculations. **2)** Derived a tractable Wasserstein-2 distance bound for flow matching models, providing the first theoretical guarantee for collapse-free policy evolution. **3)** Established a unified perspective connecting flow matching fine-tuning with traditional KL-regularized RL, enabling controllable reward-diversity trade-offs.
 - **Achievements:** **1)** Achieved state-of-the-art alignment with orders of magnitude less data while maintaining generation diversity through theoretically-grounded regularization. **2)** Validated the framework's effectiveness by successfully fine-tuning large-scale models like Stable Diffusion 3 across challenging tasks including spatial understanding and compositional generation. **3)** Published a paper called "Online Reward-Weighted Fine-Tuning of Flow Matching with Wasserstein Regularization" at **ICLR 2025** as first author.
- **Behavior Control in Reinforcement Learning**
Sept. 2021 - Aug. 2024
 - **Role:** **1)** Introduced a unified framework called LBC to achieve behavior control in RL. **2)** Provided a unified perspective on diverse RL methods for behavior control and potential enhancements. **3)** Validated LBC's efficacy through rigorous theoretical support and extensive empirical experiments.
 - **Achievements:** **1)** Surpassed 24 human world records and attained the pinnacle of performance among reinforcement learning algorithms across most tasks. **2)** Published a paper titled "Learnable Behavior Control: Eclipsing Human World Records in Atari Games through Sample-Efficient Behavior Selection" at **ICLR 2023** with oral presentation as first author.

• Sample-Efficient Reinforcement Learning

Sept. 2020 - Aug. 2024

- **Role:** **1)** Introduced a sample-efficient Reinforcement Learning (RL) framework known as GDI, which achieved human-level performance by optimizing the data distribution of RL agents. **2)** Supported the efficacy of GDI with a robust foundation, including both theoretical proofs and an extensive array of experiments conducted in Atari. **3)** Provided a unified perspective on various RL algorithms with GDI.
- **Achievements:** **1)** Outperformed prior SOTA method Agent57 with **500x less data** and **twice** the average performance. **2)** Published a paper called "Generalized Data Distribution Iteration" at **ICML 2022** as first author.

AWARDS

- | | |
|---|-------------------------|
| • Outstanding Graduates (1%) | Tianjin, China, 2021 |
| • Excellent Graduation Thesis of Nankai University | Tianjin, China, 2021 |
| • Tang Lixin Scholarship (1%) | Tianjin, China, 2021 |
| • National Scholarship , Nankai University (1/83) | Tianjin, China, 2020 |
| • Nomination for Zhou Enlai Scholarship | Tianjin, China, 2020 |
| • National Scholarship , Nankai University (1/83) | Tianjin, China, 2019 |
| • 3rd Prize, Robocup@HOME Education World Final | Sydney, Australia, 2019 |
| • Bronze Medal, ACM / ICPC Asia Regional Contest | Xuzhou, China, 2019 |
| • National 2nd Prize, National College Students Mathematical Contest in Modeling (5%) | Tianjin, China, 2018 |
| • The First Prize Scholarship, Nankai University (2/83) | Tianjin, China, 2018 |

RESEARCH EXPERIENCE

- | | |
|---|---|
| • Collapse-free Self-evolution for Large Generative Model
<i>UIUC, Urbana, IL, USA</i> | Ph.D. Candidate
<i>Aug. 2024 - Present</i> |
| <ul style="list-style-type: none"> ◦ Role: Introduced a theoretically-grounded flow matching framework (ORW-CFM-W2) that enables large generative models to continuously evolve through human feedback while preventing policy collapse. ◦ Achievements: Developed a Wasserstein-regularized learning framework that achieved optimal policy convergence in challenging tasks like text-image alignment, while maintaining generation diversity through principled regularization. The method significantly reduced computational and data requirements compared to prior approaches. | |

- Reinforcement Learning for Robotics**
Mila, Montreal, Canada

Research Assistant
Oct. 2023 - May. 2024

 - **Role:** Explored an efficient methodology for robot control in reinforcement learning and validated its effectiveness within Mujoco control task.
 - **Achievements:** Combined the priority of both model-free RL and design-based RL, and improved in several metrics. Introduced the behavior control into design-based RL, and improved the sample efficiency.
- Behavior Control in Reinforcement Learning**
Shenzhen, China

Research Assistant
Jun. 2021 - Oct. 2023

 - **Role:** Pioneered a groundbreaking methodology for behavior control in reinforcement learning and validated its effectiveness by obliterating the most challenging Atari human world records.
 - **Achievements:** Presented a cutting-edge paper titled "Learnable Behavior Control: Breaking Atari Human World Records via Sample-Efficient Behavior Selection" at **ICLR 2023** as an oral presentation, garnering a prestigious rank of **5 out of 4176** submissions.
- High Sample-efficiency Reinforcement Learning Paradigm**
Beijing, China

Research Assistant
Sep. 2020 - Jun. 2021

 - **Role:** **1)** Innovated the foundational paradigm of RL by extending the Generalized Policy Iteration (GPI) model to a more all-encompassing version, the Generalized Data Distribution Iteration (GDI). **2)** Consolidated a multitude of vast-scale RL algorithms into the GDI architecture, which can be considered a specialized form of GDI. **3)** Substantiated the theoretical superiority of GDI over GPI through rigorous empirical analysis, providing irrefutable evidence of the framework's enhanced capabilities.
 - **Achievements:** **1)** Attained State-of-the-Art (SOTA) in the Atari57 benchmark, outperforming the acclaimed Agent57 model with **500x less data** and even surpassing **22 human world records**. **2)** Authored a cutting-edge paper titled "Generalized Data Distribution Iteration," which was published at **ICML 2022**, a highly esteemed academic venue.
- Model-free Reinforcement Learning Algorithm**
Beijing, China

Research Assistant
Sep. 2020 - Jun. 2021

 - **Role:** **1)** Spearheaded a comprehensive framework for model-free reinforcement learning titled CASA, which unifies and enhances existing approaches for more efficient and effective learning. **2)** Introduced a novel mechanism for policy-based reinforcement learning rooted in bandit theory, free from entropy regularization, which enhances the training process and leads to better performance.
 - **Achievements:** Authored two papers entitled "CASA: A Bridge Between Gradient of Policy Improvement and Policy Evaluation" and "An Entropy Regularization Free Mechanism for Policy-based Reinforcement Learning", which have advanced the state-of-the-art in the field of reinforcement learning. Additionally, secured nine patents, highlighting the pioneering and innovative contributions to the field.
- Model-based Reinforcement Learning Algorithm**
Tianjin, China

Research Assistant
Apr. 2020 - Sep. 2020

 - **Role:** Introduced a groundbreaking method for achieving unparalleled performance on the challenging MuJoCo environment, which represents a significant breakthrough in the field of reinforcement learning.
 - **Achievements:** Presented a cutting-edge paper titled "Critic PI2: Master Continuous Planning via Policy Improvement with Path Integrals and Deep Actor-Critic Reinforcement Learning."
- Multifunctional Home Service Robot**
Tianjin, China

Research Assistant
Sep. 2018 - Jul. 2019

 - **Role:** **1)** Devised a comprehensive solution for the entire project, along with a finite state machine diagram. **2)** Employed cutting-edge ROS-based algorithms for autonomous navigation and RRT path planning.
 - **Achievements:** Presented the project in the 2019 ROBOCUP Sydney World Finals and won **3rd Prize**.
